Dense convolutional neural network in embedded systems

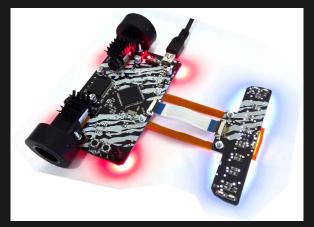

Michal CHOVANEC, PhD

Motivation

- build smarter robots
- embedded particle filtering
- embedded localization
- embedded decision making

Dense convolutional neural network in embedded systems

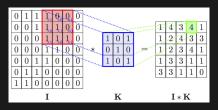

Basic math

name	marking	dimension	C++ example
scalar	5	0	float s;
vector	\vec{v}	1	float v[10];
matrix	М	2	float m[5][7];
tensor	Т	3 N	float t[6][8][3];

examples:

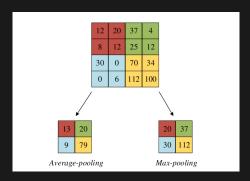

- Energy is scalar property
- Velocity is vector, defined as $\frac{d\vec{x}}{dt}$
- Rotation matrix
- RGB color image is Tensor (3rd order vector)
- RGBA color image is Tensor (4th order vector)

Basic math - discrete convolution

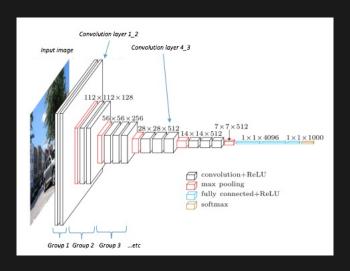

```
for (unsigned y = 0; y < input_height; y++)
for (unsigned x = 0; x < input_width; x++)
{
    float sum = 0.0;
    for (unsigned ky = 0; ky < kernel_height; ky++)
    for (unsigned kx = 0; kx < kernel_width; kx++)
    {
        sum+= kernel[ky][kx]*input[y + ky][x + kx];
    }
    output[y][x] = sum;
}</pre>
```

Basic math - pooling

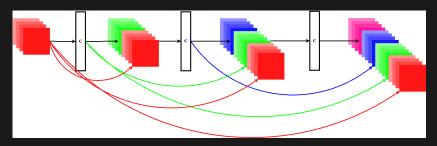

Convolutional neural network - CNN

Dense CNN

State of the art in image recognition.

architecture	depth	params	CIFAR 10	CIFAR 100	
ResNet	110	1.7M	13.63%	44.74%	
ResNet	110	1.7M	11.66%	37.8%	
Stochastic Depth	110				
DenseNet k = 12	40	1.0M	7.0%	27.55%	
DenseNet k = 24	100	27.2M	5.83%	23.42%	

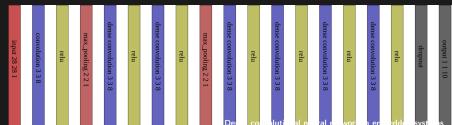

Network example - MNIST handwritten digits recognition

- training count 50000
- testing count 10000
- input size 28x28x1 pixels

Tested architecture C8 - P2 - D8 - D8 - P2 - D8 - D8 - D8 - FC

Training result

Network success rate - confusion matrix

976		1				6			
	1129					3	3		
	3	1028					6		
			995		4				
				973		1		2	
	1		4		885	2			5
		1				942			
	1	1	6				1018		6

99.592	99.471	99.612	98.515	99.084	99.215	98.33	99.027	99.281	97.82
0000	400	00%							

Embedded network implementation

convert float weights to int8_t

$$scale = max(|\vec{w}|_1)$$

 $\vec{w}' = \vec{w} \frac{127}{scale}$

use double buffer memory trick

- unsigned buffer size = $\max_i(layers[i].input size());$
- buffer_a = new int8_t(buffer_size);
- buffer_b = new int8_t(buffer_size);

Optimize kernel - templates

```
templete < unsigned int kernel_size >
void convolution()
{
    for (unsigned y = 0; y < input_height; y++)
        for (unsigned x = 0; x < input_width; x++)
        {
            float sum = 0.0;

            for (unsigned ky = 0; ky < kernel_size; ky++)
            for (unsigned kx = 0; kx < kernel_size; kx++)
            {
                 sum+= kernel[ky][kx]*input[y + ky][x + kx];
            }
            output[y][x] = sum;
            }
        }
}</pre>
```

Optimize kernel - unrolling

```
templete < unsigned int kernel size >
      convolution()
        (unsigned y = 0; y < input height; y++)
        (unsigned x = 0; x < input_width; x++)
        float sum = 0.0:
            (kernel size == 3)
           sum += kernel[0][0] * input[y + 0][x + 0];

sum += kernel[0][1] * input[y + 0][x + 1];
           sum += kernel[0][2]*input[y + 0][x + 2];
           sum += kernel[1][0]*input[y + 1][x + 0];
           sum += kernel[1][1]*input[y + 1][x + 1];
           sum+= kernel \begin{bmatrix} 1 \end{bmatrix} \begin{bmatrix} 2 \end{bmatrix} * input \begin{bmatrix} y + 1 \end{bmatrix} \begin{bmatrix} x + 2 \end{bmatrix};
           \underline{sum+= ker} nel[2][0]*input[y + 2][x + 0];
           sum += kernel[2][1] * input[y + 2][x + 1];
           sum += kernel[2][2]*input[y + 2][x + 2];
        output[y][x] = sum;
```

3.6x speed up

Optimize kernel - SIMD

```
sum += kernel[0][0]*input[y + 0][x + 0];
sum += kernel[0][1]*input[y + 0][x + 1];
sum += kernel[0][2]*input[y + 0][x + 2];
smlabb r2, fp, sl, r2
ldrsb.w sl, [r8, #1]
[drsb.w.fp.[r0.#-24]]
smlabb r2, fp, sl, r2
ldrsb.w sl, [r8, #2]
[drsb.w.fp.[r0.#-23]]
smlabb r2, fp, sl, r2
ldrsb.w sl [r8 #3]
[drsb.w fp, [r0, #-22]]
```

Results

- float network accuracy 99%
- int8 network accuracy 98.97%
- runtime on 216MHz Cortex M7 18ms (72Mop/s)
